

Callisto UCM

THE VALUE ADDED POWER PACKAGE FOR CISCO®'S UNIFIED COMMUNICATIONS MANAGER!

A professional and efficient customer communication with modern technology is a growing key to success - also for small and medium enterprises. It used to be too expensive for them, but now a direct and fast service response to customer requests via phone, facsimile, e-mail, web etc. is crucial for the market success. If the enterprise communication processes are good, the customers feel good. Callisto UCM adds important features to Cisco®'s Unified Communications Manager. It integrates itself easily into the whole IP- and telephony structure, which makes operations and use very easy.

- ▶ COST-EFFICIENT AND PROFESSIONAL COMMUNICATION
- ▶ ALL FEATURES FULLY INTEGRATED INTO CISCO®'S UNIFIED COMMUNICATIONS MANAGER
- ▶ ALL IN A BOX, COMPACT AND EASY INSTALLATION
- ▶ OPEN AND FUTURE-PROOF SYSTEM, SINCE BASED ON STANDARDS
- ▶ USER INTERFACE IN ENGLISH, GERMAN, FRENCH, ITALIAN AND SPANISH
- ▶ EASY AND QUICK ENABLING OF ADDITIONAL CHANNELS AND FUNCTIONS VIA LICENSE KEY, EASY TO UNDERSTAND LICENSE KEY MODEL
- ▶ DESIGNED AND CREATED ON THE DEVELOPMENT PLATFORM CTMAKER®, INDIVIDUAL, FAST, EASY AND COST-EFFICIENT ADAPTATIONS ARE FEASIBLE

Callisto UCM was designed and developed to make Cisco®'s Unified Communications Manager (CUCM) your communication center of the future. Both systems, based on leading technologies, form a perfect team. This gives you all the advantages of a fully converged PABX and the IT infrastructure. In close cooperation with CUCM manufacturer Cisco® Systems, Callisto UCM is adapted to latest market demands, and new, innovative modules and features are added continually. This makes your investment a safe one.

Callisto UCM includes everything you and your customers expect from a communication solution on top of standard telephony services like: professional voice boxes with individual auto-attendant and unified messaging extensions, directory service, music-on-hold service, reports, facsimile, virtual conference room, administration and configuration service, interface for individual applications (OIM), etc.

Of course, Callisto UCM is web-based, which gives you access to your applications from anywhere. In case you don't have a Web access at your disposal all functions are also available by a phone menu. Callisto UCM offers individual user interfaces in English, German, French, Italian and Spanish.

Because of its modular architecture, Callisto UCM fits your individual communications demands perfectly. New features and additional channels can be enabled easily and fast on demand via the integrated license key system.

As a standard system Callisto UCM is based on the unique CTI development environment CTMaker® by CTModule AG. Callisto UCM partners can realize their individual feature solutions in a fast, flexible and cost-efficient manner. By using standard interfaces like 'Open Inbound Manager' (OIM), CTMaker® can meet any demands. Please tell your Callisto UCM partner your individual wishes. Almost everything is possible!

Simplicity was one of the main design targets of the Callisto UCM. Everything, which is not easy to use and to maintain, is most probably not suitable for daily business. That is why you can plug your Callisto UCM to your network, assign an IP address, and off you go! Your Callisto UCM partner will be glad to help you with your individual settings or even realize your special 'Open Inbound Manager' application if required.

Callisto UCM
