

Administration management

Access Callisto with a browser from a client PC:

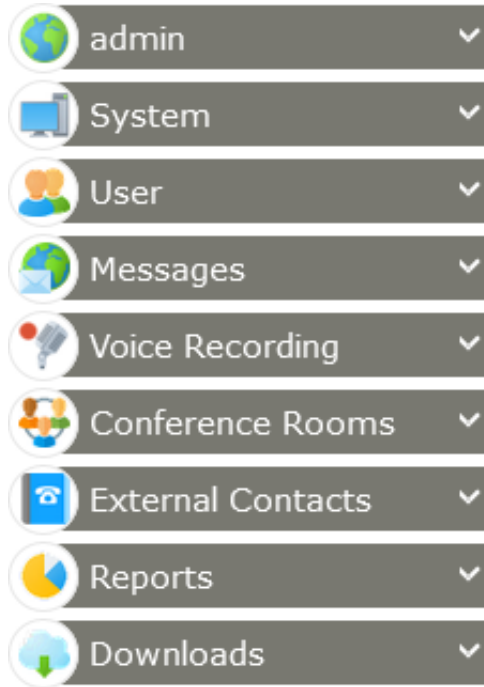

1. Connect to: `http://<callisto>/`, where `<callisto>` is the domain or IP address of your Callisto installation.
2. To logon, type the user name `admin` and default password `admin`. It is possible that the default administrator password was changed during installation. In this case, consult with the Cisco partner who performed the Callisto installation.

The screenshot shows a login interface with the following elements:

- The word "Login" in blue text at the top left.
- A user input field with a person icon on the left, containing the text "admin".
- A password input field with a lock icon on the left, containing six black dots.
- A blue rounded rectangular button labeled "Login".
- A link labeled "Single Sign-On" in blue text below the button.

3. After successful logon, the administration navigation menu is shown.

4. After logging on for the first time, it is highly recommended to change the default user name and password for security reasons. From the navigation bar, choose admin > Account. Type a valid E-Mail address and set the preferred Language and Save the settings.

A screenshot of the 'admin' account settings page. The page title is 'admin' with a user icon. The form contains fields for Username (admin), Password (masked), Department, Last Name (Administrator), First Name, E-Mail (admin@company.com), Language (English), Number, and Mobile. There are 'Save' and 'Cancel' buttons at the bottom right.

5. Administrator accounts cannot be used concurrently. Only one administrator at a time can be logged on to the appliance.
6. If the administrator's logon details should get lost, they can be retrieved from the backup system file. Therefore it is important to ensure that no unauthorized user has access to the backup file.
